Body Style	Coupe	Fuel	Petrol
Transmission	Semi-automatic	Chassis No.	LA05021

The Lamborghini Aventador Superveloce (SV) is a masterpiece of automotive engineering, blending cutting-edge technology with exhilarating performance. The SV is powered by a naturally aspirated 6.5-litre V12 engine, a hallmark of Lamborghini's engineering prowess. With improvements over the standard Aventador, the engine delivers around 740 horsepower, which enables the car to reach 0-60 mph in just 2.8 seconds. The high-revving nature of the V12 offers a thrilling driving experience that is sharp and visceral with significant emphasis on reducing weight without compromising strength or rigidity. The SV employs extensive use of carbon fibre and lightweight materials, shedding around 50 kg compared to the regular Aventador. This focus on weight reduction improves acceleration, handling, and overall performance, making the car feel more agile and responsive on the road or track. The SVâ€™s aggressive design follows Lamborghiniâ€™s â€œDesign to Weightâ€ concept, with every aspect of the car optimised for both aesthetics and performance. In essence, the Aventador SV is all about creating the purest driving experience possible, offering thrilling performance while embracing the spirit of Lamborghini â€”
